

Class Schedule Navigation App

Authors: Aidan Jones, Jacob Krawczyk, Paxton Langland, Robbie Knight, Thomas Lloyd

Problem Statement

- College students are often pressed for time and need a way to know when to promptly leave their dorms, the library, etc to arrive at their next class on time. Our solution would be to provide a way for users to be updated with times and best walking paths to arrive for their classes on time.

Who is experiencing the problem?

- College students that have classes that are not close in time or location to each other are experiencing the problem

What is the problem?

- Students don't know how much time they need to get to class

Where does the problem present itself?

- The problem presents itself on college campuses where students need to drive or walk to classes.

Why does it matter?

- It matters because students can struggle with figuring out when they should leave to go to their classes, and they can end up too early or too late to their classes.
